

Taiwo Alabi

MSc Artificial Intelligence | AI, Data, Technology

newalabitaibo625@gmail.com | +353 87 004 2838 | linkedin.com/in/tami-alabi | github.com/iamtamilore | iamtamilore.github.io

Dublin, Ireland | Stamp 2 | *Eligible for Stamp 1G post-graduation (Jan 2027)*

Profile

MSc Artificial Intelligence candidate with professional experience in data analytics, AI systems and software engineering. Skilled in **Python**, **SQL**, machine learning and **LLM-based applications**, with experience automating data workflows, evaluating AI systems and building end-to-end applications. Seeking a 2027 graduate role in AI, Data or Technology in Ireland.

Education

National College of Ireland, Dublin

Jan 2026 to Jan 2027

MSc Artificial Intelligence (part time)

MSc Artificial Intelligence (part time). Assessed on reviewing and critiquing AI systems, not only building them. Architecture review against quality attributes, evaluating search for completeness and admissibility. Critiquing model quality and evaluation design, and critiquing deployment infrastructure.

Afe Babalola University, Lagos

Sep 2021 to Feb 2025

BSc Computer Science, Second Class Honours, Upper Division (2.1)

Professional Experience

At Huawei Technologies (via RGS, within the Globacom Telecommunications department), a world leader in telecommunications infrastructure powering networks that carry hundreds of millions of records a day. Working within the Software Department, further developing professional experience in software engineering and improving my skills in this area.

Huawei Technologies, Globacom Telecommunications department, Lagos Jul 2025 to Dec 2025

Data Specialist

- Developed Python scripts to automate daily CRM data extraction, reducing manual reporting time by **15 hours per week**.
- Executed SQL queries to clean and validate **100,000+ rows** of user engagement data, identifying a **14% discrepancy** in monthly active user metrics.
- Built dashboards in **SSRS and Tableau** tracking **30+ KPIs** across departmental operations.
- Designed database schemas and tables to satisfy **20+ business requirements** for new software systems.
- Collaborated with the solutions architect on a customer data migration, segmenting data by type and sensitivity.
- Partnered with the QA team to design and execute **440+ User Acceptance Tests (UAT)**.

Huawei Technologies, Globacom Telecommunications department, Lagos Mar 2025 to Jul 2025

Data Analyst Intern

- Translated raw data into actionable business insights by engaging with stakeholders to define reporting requirements.
- Managed **Power BI** assets including reports, dashboards, workspaces and underlying datasets.
- Built scalable data models and integrated advanced analytics into reporting pipelines.

- Led data profiling, cleaning and transformation workflows.
- *Internship extended by the team due to strong performance.*

Turing, Remote (Dublin) Apr 2026 to May 2026

AI Quality Analyst, Google Gemini Evaluation Programme

- Evaluated **LLM outputs** for factual accuracy, safety and hallucination using **structured rubrics**.

Selected Projects

Smart Medical Records Engine

FastAPI, PostgreSQL/pgvector, LangGraph, Docker

- **Problem:** Clinicians have limited time to review fragmented patient records, risking missed critical warnings like drug allergies.
- **Solution:** Built a secure, patient-specific **RAG search system**. Designed to run a **local LLM** within hospital infrastructure, keeping patient data on-premises.

[Read the write-up \(PDF\)](#) | [Architecture diagram](#) | [Data model](#) | [Source code](#)

TermsGuard AI

Sentence transformers, FAISS, Claude API, Flask

- **Problem:** Privacy policies are too long for users to read, leading to uninformed consent.
- **Solution:** Built an AI system that flags problematic data-use clauses with evidence-linked explanations. Reduced analysis latency from **28 seconds to under 10 seconds** while improving classification accuracy.

[Live demo](#) | [Read the write-up \(PDF\)](#) | [Source code](#)

Automated QA Gate for AI Generated Imagery

TensorFlow/Keras, ResNet50, scikit-learn

- **Problem:** AI-generated product images can contain subtle defects (colour drift, model inconsistency) that damage brand trust.
- **Solution:** Built a computer vision pipeline to detect image defects. Achieved **90% accuracy** with **zero false acceptance** by optimising the classification threshold.

Technical Skills

Languages: **Python, SQL**

Data & Infrastructure: Hadoop HDFS, HBase, GaussDB, PostgreSQL, **pgvector**, Docker, Docker Compose, **Kubernetes**, FastAPI, Flask, Google Cloud, **Google BigQuery**, Google Analytics, SQL Server Reporting Services (SSRS)

Machine Learning: scikit-learn, pandas, **TensorFlow/Keras**, transfer learning, **reinforcement learning**, Q-Learning, neural networks, **Transformers**, Predictive Analytics, Data Mining

AI & Agents: **RAG pipelines**, **vector search (pgvector, FAISS)**, LangGraph, **LLM evaluation**, genetic algorithms

Systems and Evaluation: training-serving skew and feature contracts, model registries and versioned artefacts, **blue-green and canary rollout**, decoupling inference from the OLTP path, **p95 and p99 latency targets** with defined fallback, baseline design, sliced evaluation, **confidence calibration**, GDPR data cataloguing, data lineage, UAT design.

Tools: Git, GitHub, Claude Code, Linux, Power BI, Tableau, Excel, Google Sheets, Google Colab, **Draw.io**

Domain Techniques: Data Warehousing, Survey Data Collection, Data Visualization, **Business Process Model and Notation (BPMN)**

Languages Spoken: English (Native)
