PROFESSIONAL SUMMARY

A reliable and organized person with experience in data quality, classification, and controls testing as well as in hospitality. Comfortable auditing records, validating data migrations, building dashboards, and supporting smooth operations during busy periods. With my experience and ongoing Master's in Artificial Intelligence, I am ready to contribute effectively to a team.

SKILLS

- Data classification
- Data quality auditing
- Requirements analysis
- Subscriber metrics reporting
- Process modelling
- Reporting dashboard design
- Data lineage documentation
- Controls testing
- Migration validation

EDUCATION

National College of Ireland, MSc. Artificial Intelligence

January 2026 - Expected

Afe Babalola University, BSc. Computer Science

September 2021 - June 2022

EXPERIENCE

Receptionist (Part-time)

Temple Bar Townhouse - Dublin, Ireland

September 2026 - Present

- Welcomed guests and assisted with check-in and room arrangements.
- Managed reservations and bookings through Guestline, Expedia, and Booking.com.
- Collected and processed guest payments.
- Responded to guest requests and helped resolve issues politely.
- Communicated with guests and team members to support smooth hotel operations.
- Supported general reception duties and other tasks as needed.

Data Specialist

Huawei Technologies - Globacom Telecommunications Department,

Lagos

March 2025 - December 2025

- Promoted from intern after the team extended the role.
- Supported a customer data migration with the solutions architect.
- Designed test cases with the test team to validate migration integrity.
- Documented data handling rules and privacy-aligned cataloguing.
- Profiled and validated user engagement data, resolving a reporting discrepancy.
- Gathered stakeholder requirements and built governed, reusable datasets.
- Owned reporting dashboards and workspaces.
- Built dashboards tracking departmental performance.
- Automated daily data extraction tasks, reducing manual reporting effort.
- Designed database tables to support new software requirements.

Customer Care Process Automation

Python and text classification tools

- Automated ticket triage for a mobile network's customer care using text classification.
- Built an escalation gate so uncertain tickets route to a person instead of a guess.
- Mapped the existing process before automating, replacing manual steps.

Smart Medical Records Engine *Database and retrieval tools*

- Built a retrieval system over patient notes that surfaces critical history.
- Enforced patient scoping so records stay separated by patient.
- Logged every access and stripped personal information before processing.

TermsGuard AI *Text analysis and search tools*

- Contributed the retrieval pipeline and rule guards to a team project.
- Flags risky clauses in privacy policies grounded in exact source text.
- Reduced analysis time and improved how the system handles negation.
